

Vitafarm Premium Calf Milk Replacer

FEEDING GUIDE

Vitafarm Premium Calf Milk Replacer is scientifically formulated powder that has a base of quality full cream and skim milk powders.

Vitafarm Premium CMR also contains added essential vitamins and minerals for optimum growth. Bovatec and Biomos have also been included to enhance the rumen development.

Recommended directions for feeding

When preparing to blend, pour half of the recommended volume of warm water (approx 40 degrees C) into your container. Then add the required dosage of Vitafarm CMR and mix thoroughly ensuring there are no lumps. Then add the balance of the warm water to the mix and stir again.

Ideally calves should be fed twice daily (morning and afternoon) dosage as per chart below.

Age Days	Weight per feed per calf	Volume of warm water per feed per calf
1 to 3	Colostrum preferred	
1 to 3	175 grams	1.5 litres
4 to 7	250 grams	2.0 litres
8 to 14	325 grams	2.5 litres
15 to 21	375 grams	3.0 litres
22 to weaning	500 grams	4.0 litres

If feeding once a day it is imperative that the calf receives the correct amount of volume at the higher concentration. Therefore a suitable feeder should be used.

Vita Premium Calf milk replacer is calf specific and should be fed to calves only. Do not feed to Horses, Lambs, Pigs, Dogs or other farm animals.

Typical Analysis

Protein	26%
Fat	22%
Calcium	1.0%
Moisture	3.5%
